

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

C. croceus Fr.
- fff. Pileus and stem scarlet or blood red
- g. Pileus broad as compared with the rather short stem; spores
 $8 \times 5\mu$*C. cinnabarinus* Fr.
- gg. Pileus narrow; stem longer; spores $6 \times 4\mu$
C. sanguineus (Wulf.) Fr.

FIG. 245.—EARTH-STAR. GE-AS'-TER MIN'-I-MA.—A rather common plant here shown in natural size. The cut was made from specimens sent by Supt. M. E. Hard, who collected them near Chillicothe, Ohio, November 9, 1905.

CORRECTION.—The above half-tone was issued on p. 201 as *Geaster triplex*, which was a mistake; it should have been *Geaster minima* as here given. Both of these species were received at the same time and inadvertently the name of the little species got wrong in print.
